## Molar Mass and the Mole

Molar Mass (M): the mass of 1 mol of a substance (g/mol)

\*since 1 mol of C-12 = 12g,

Average atomic mass in u = Molar Mass in g

- Ex 1. One mol of O = 16.00 g
- Ex 2. One mol of AgI = 107.87+126.90 = 234.77g

Ex 3. Find the M for

- a) NaCl
- b) CH<sub>4</sub>
- c)  $Ca_3(PO_4)_2$

## Moles to Mass Conversions

 $m = n \times M$ 

- Ex 4. What mass does a 0.750 mol sample of CO<sub>2</sub> have?
- Ex 5. How many mol are in a 23.6 g sample of MgCl<sub>2</sub>?
- Ex 6. What is the mass of  $3.67 \times 10^{24}$  formula units of  $K_2O$ ?
